

Facilitation Results Chain/ Impact Logic

Result Chains / Impact Logics

2

Results chains:

- are the “backbone” of program facilitation activities
- constitute a key monitoring tool
- present how a LF initiative and corresponding program facilitation activities are expected to contribute to permanent improvements in market systems functions and impact on the target group
- constitute a guide for project teams, depicting the relationship between what they do, the system-level changes they are trying to achieve, and the pathway to poverty reduction.
